CS 218 - Assignment #3

Purpose: Become familiar with the assembler, linker, and debugger. Display values in memory and

learn to use basic arithmetic instructions.

Due: Tuesday (1/30)

Points: 40

Assignment:

Use the provided assembly language program template to compute the following calculations:

```
, *******************************
; Byte Operations
; unsigned byte additions
        bAns1 = bNum1 + bNum2
        bAns2 = bNum1 + bNum3
         bAns3 = bNum3 + bNum4
; ----
; signed byte additions
     bAns4 = bNum5 + bNum6
         bAns5 = bNum1 + bNum6
; unsigned byte subtractions
        bAns6 = bNum1 - bNum2
         bAns7 = bNum1 - bNum3
;
         bAns8 = bNum2 - bNum4
; signed byte subtraction
      bAns9 = bNum6 - bNum5
         bAns10 = bNum5 - bNum2
; unsigned byte multiplication
    wAns11 = bNum1 * bNum3
         wAns12 = bNum2 * bNum2
         wAns13 = bNum2 * bNum4
; signed byte multiplication
       wAns14 = bNum5 * bNum5
         wAns15 = bNum1 * bNum5
; unsigned byte division
        bAns16 = bNum1 / bNum2
         bAns17 = bNum3 / bNum4
         bAns18 = wNum1 / bNum4
         bRem18 = wNum1 % bNum4
; signed byte division
         bAns19 = bNum5 / bNum6
         bAns20 = bNum6 / bNum3
         bAns21 = wNum6 / bNum4
        bRem21 = wNum6 % bNum4
, *****************************
; Word Operations
; unsigned word additions
         wAns1 = wNum1 + wNum3
         wAns2 = wNum2 + wNum4
         wAns3 = wNum3 + wNum2
; signed word additions
   wAns4 = wNum5 + wNum6
        wAns5 = wNum1 + wNum6
```

```
; unsigned word subtractions
        wAns6 = wNum1 - wNum2

; signed double-word multiplication
         qAns14 = dNum5 * dNum2
         qAns15 = dNum5 * dNum5
; unsigned double-word division
         dAns16 = dNum1 / dNum2
          dAns17 = dNum3 / dNum4
          dAns18 = qAns11 / dNum4
```

```
dRem18 = qAns11 % dNum4
; ----
; signed double-word division
       dAns19 = dNum6 / dNum5
         dAns20 = dNum1 / dNum5
        dAns21 = qAns12 / dNum6
        dRem21 = qAns12 % dNum6
, *********************************
; QuadWord Operations
; unsigned quadword additions
   qAns1 = qNum2 + qNum3
        qAns2 = qNum1 + qNum4
        qAns3 = qNum4 + qNum2
; signed quadword additions
        qAns4 = qNum6 + qNum5
         qAns5 = qNum1 + qNum5
; unsigned quadword subtractions
   qAns6 = qNum2 - qNum3
        qAns7 = qNum1 - qNum4
        qAns8 = qNum2 - qNum3
; signed quadword subtraction
   qAns9 = qNum6 - qNum5
         qAns10 = qNum6 - qNum2
; unsigned quadword multiplication
        dqAns11 = qNum3 * qNum2
         dqAns12 = qNum3 * qNum3
         dqAns13 = qNum4 * qNum1
; signed quadword multiplication
         dqAns14 = qNum1 * qNum6
         dqAns15 = qNum5 * qNum6
; unsigned quadword division
  qAns16 = qNum1 / qNum2
         qAns17 = qNum3 / qNum4
;
         qAns18 = dqAns11 / qNum4
;
         qRem18 = dqAns11 % qNum4
; signed quadword division
   qAns19 = qNum6 / qNum5
        qAns20 = qNum2 / qNum5
;
        qAns21 = dqAns12 / qNum6
;
         qRem21 = dqAns12 % qNum6
```

Refer to the on-line text for information and examples of the addition, subtraction, multiplication, and division instructions.

Data Declarations:

Use the data declarations in the provided main. *Note*, the main includes some of the calculations already done as examples.

Submission:

When complete, submit:

• A copy of the *source file* via the class web page (assignment submission link) by class time (Section 001, 2:30 PM and Section 002, 5:30 PM). Assignments received after the due date/time will not be accepted.

Debugger Commands

You will need to execute the code and display the variables in the same manner as previous assignments. The command to examine memory is as follows:

x/<n><f><u> &<variable>Examine memory location <variable> number of locations to display, 1 is defualt. <n> d – decimal <f> format: x - hexu – unsigned c – character s – string f – floating point b - byte (8-bits)unit size: <u>> h – halfword (16-bits) w - word (32-bits) g - giant (64-bits)

For example, some of the applicable memory examine commands for various data types are as follows:

Operation	Command
Display signed decimal byte values.	x/db &bnum1
Display unsigned decimal byte values.	x/ub &bnum1
Display signed decimal word values.	x/dh &wnum1
Display unsigned decimal word values.	x/uh &wnum1
Display hex word values.	x/xh &wnum1
Display signed decimal double-word values.	x/dw &wnum1
Display unsigned decimal double-word values.	x/uw &wnum1
Display hex double-word values.	x/xw &wnum1
Display signed decimal double-word values.	x/dg &wnum1
Display unsigned decimal double-word values.	x/ug &wnum1
Display hex quadword values.	x/xg &wnum1

You may use the provided "a3in.txt" to display the variables within the debugger. However, for future assignments you will need to select the correct command to display the data based on the defined size and any guidance from the assignment. Refer to the on-line text for additional information.
